

# Alberta Student Aid System

## Confirmation of Registration (COR)

### COR Functions:

- confirm registration
- request tuition remittance
- report amended registration (withdrawals)

There are 3 different ways for a school to do COR. What is the best method for your school?

---

### COR Online

Allows authorized school staff to perform COR Functions online.

#### Example:

If you have 500 students approved for Alberta Student Aid, you will need to access each student individually to update their COR Status to either “Confirmed as Yes” or “Confirmed as No”.

#### PROS:

- Online access to COR functions
- Access to your students’ information

#### CONS:

Confirm one student at a time - inefficient for large numbers of students.

### COR Batch

Allows authorized school staff to download/upload XML files to perform COR Functions.

#### Example:

If you have 500 students approved for Alberta Student Aid, you can upload all the COR responses to Student Aid in one xml file.

#### PROS:

Upload and perform COR functions for large numbers of students.

#### CONS:

XML files required to upload “batches” of students.  
For efficiency, your school should create an automated process to convert the files.

### Batch Procedure via Automated COR Web Service

Allows your school to exchange batch XML files with Alberta Student Aid to automatically upload COR information via a web service.

#### Example:

If you have 500 students approved for Alberta Student Aid, your system can generate a file with your COR responses and send the file to Student Aid.

#### PROS:

Confirm students automatically, one by one or in large batches, from school software to the automated COR Web Service.

#### CONS:

Requires system changes involving school technical staff and Student Aid technical staff for development and testing.  
Your school will need to be “certified” to use this process.
